## Class 4 Maths — CA-1 (Easy) — Answer Key

| | |
|---|---|
| Class : 4 | Max Marks : 50 |
| Subject : Maths (Math-Mela) | Duration : 1 Hr 30 Min |

Syllabus: Chapters 1–3 — Shapes Around Us, Hide and Seek, Pattern Around Us

General Instructions: All questions are compulsory. For Section A, write the correct option letter.

## ANSWER KEY

### SECTION A — Multiple Choice Questions (1 Mark each)

**1.** A shape with 3 sides and 3 angles is called a ____. *(1 Mark)*

**A.** Square
**B. Triangle ✓**
**C.** Circle
**D.** Pentagon

**2.** How many faces does a cuboid have? *(1 Mark)*

**A.** 4
**B. 6 ✓**
**C.** 8
**D.** 12

**3.** A right angle measures exactly ____. *(1 Mark)*

**A.** 45 degrees
**B. 90 degrees ✓**
**C.** 180 degrees
**D.** 360 degrees

**4.** When you look at an object from directly above, which view are you seeing? *(1 Mark)*

**A.** Front view
**B.** Side view
**C. Top view ✓**
**D.** Back view

**5.** On a grid, if an object is in the top-left corner, where is it located? *(1 Mark)*

**A.** At the very bottom
**B. In the first row, first column ✓**
**C.** In the last row, last column
**D.** In the middle

**6.** Which of these numbers is an even number? *(1 Mark)*

**A.** 7
**B.** 15
**C. 24 ✓**
**D.** 31

**7.** Which of these numbers is an odd number? *(1 Mark)*

**A.** 12
**B.** 18
**C. 25 ✓**
**D.** 40

**8.** Even numbers always end in which digits? *(1 Mark)*

**A.** 1, 3, 5, 7, 9
**B. 0, 2, 4, 6, 8 ✓**
**C.** Only 0
**D.** Only 5

### SECTION B — Short Answer Questions (2 Marks each)

**1.** Name two 2D shapes and how many sides each has. *(0 Marks)*

➤ A triangle has 3 sides, and a square has 4 sides.

**2.** What is the difference between a face, an edge, and a corner of a 3D shape? *(0 Marks)*

➤ A face is a flat or curved surface, an edge is where two faces meet, and a corner (vertex) is where two or more edges meet.

**3.** How many edges does a cube have? *(0 Marks)*

➤ A cube has 12 edges.

**4.** If you are looking at a toy car from the side, which view are you seeing? *(0 Marks)*

➤ You are seeing the side view of the toy car.

**5.** On a grid map, how would you describe the position of an object in the middle of the second row and second column? *(0 Marks)*

➤ The object is located at row 2, column 2 of the grid.

**6.** Write any three even numbers between 10 and 20. *(0 Marks)*

➤ 12, 14, and 16 are three even numbers between 10 and 20.

**7.** Write any three odd numbers between 20 and 30. *(0 Marks)*

➤ 21, 23, and 25 are three odd numbers between 20 and 30.

**8.** If you have 15 laddoos, can they be grouped into complete pairs? Why or why not? *(0 Marks)*

➤ No, 15 cannot be grouped into complete pairs because it is an odd number; grouping 15 into pairs would leave 1 laddoo without a partner.

**9.** If Ravi has a ₹100 note and a ₹20 note, how much money does he have in total? *(0 Marks)*

➤ Ravi has ₹120 in total (100 + 20 = 120).

**10.** Name one 3D shape that has a curved surface and one that has only flat faces. *(0 Marks)*

➤ A sphere has a curved surface, while a cube has only flat faces.

## SECTION C — Short Answer Questions (Explain) (3 Marks each)

**1.** Explain the difference between 2D and 3D shapes, giving one example of each. *(0 Marks)*

➤ 2D shapes are flat and have only length and width, such as a triangle or a square.
➤ 3D shapes have length, width, and height (or depth), such as a cube or a cone.
➤ This means 3D shapes take up actual space and can be picked up, while 2D shapes are flat drawings or surfaces.

**2.** Describe how the top, front, and side views of a simple object like a box might look different from each other. *(0 Marks)*

➤ The top view of a box would show a flat rectangle or square shape, as seen from directly above.
➤ The front view would show the height and width of the box as seen face-on.
➤ The side view would show the depth and height of the box, which might look different from the front view if the box is not a perfect cube.

**3.** Explain how grouping objects into pairs helps us understand even and odd numbers. *(0 Marks)*

➤ When objects are grouped into pairs (groups of 2), numbers that form complete pairs with nothing left over are called even numbers.
➤ Numbers that leave one object without a pair are called odd numbers.
➤ This grouping method gives us a simple, visual way to identify whether any number is even or odd.

**4.** A cuboid follows the rule Faces + Corners - Edges = 2. Verify this rule using a cuboid's properties (6 faces, 8 corners, 12 edges). *(0 Marks)*

➤ A cuboid has 6 faces, 8 corners, and 12 edges.
➤ Using the rule: 6 + 8 - 12 = 2.
➤ This confirms the rule holds true for a cuboid, matching what is known as Euler's formula for solid shapes.

## SECTION D — Long Answer Questions (5 Marks each)

**1.** Describe at least four different 2D and 3D shapes you can find in your classroom, explaining their properties (sides, angles, faces, edges, or corners as relevant). *(0 Marks)*

➤ A book is shaped like a cuboid, with 6 rectangular faces, 12 edges, and 8 corners.
➤ A clock might be shaped like a circle, a 2D shape with no straight sides or corners, and no angles.
➤ A set square could be shaped like a triangle, a 2D shape with 3 sides and 3 angles.
➤ A ball used in class could be a sphere, a 3D shape with one curved surface and no flat faces, edges, or corners.

**2.** Imagine you are flying a drone above your school. Describe what you would see in the top view, and explain how this is different from what you would see standing at the school gate (front/side view). *(0 Marks)*

➤ From the top view (drone), you would see the outline shapes of buildings, the playground, and pathways laid out like a map, without seeing the height of the buildings.
➤ Standing at the school gate gives a front or side view, where you would see the height and front-facing details of the buildings, like doors, windows, and walls, but not the full layout of the school grounds.
➤ This shows how different views give different types of useful information about the same place.
