Class 3 Maths — CA-1 (Easy) — Answer Key

Class : 3

Subject : Maths (Math-Mela)

Max Marks : 50

Duration : 1 Hr 30 Min

Syllabus: Chapters 1–3 — What's in a Name?, Toy Joy, Double Century

General Instructions: All questions are compulsory. For Section A, write the correct option letter.

ANSWER KEY

SECTION A — Multiple Choice Questions (1 Mark each)

1. Which of these is a good way to keep track of how many cows you have without knowing big numbers? (1 Mark)

A. Guessing

B. Making one mark for each cow (tally marks) ✓

C. Not counting at all

D. Asking a friend to remember

2. A cube has how many flat faces? (1 Mark)

A. 4

B. 6 ✓

C. 8

D. 2

3. Which shape looks like a ball? (1 Mark)

A. Cube

B. Cone

C. Sphere ✓

D. Cylinder

4. A cylinder has how many curved surfaces? (1 Mark)

A. 0

B. 1 ✓

C. 2

D. 3

5. Which shape has one flat circular face and one pointed tip? (1 Mark)

A. Cone ✓

B. Cube

C. Cuboid

D. Sphere

6. What number comes right after 199? (1 Mark)

A. 198

B. 200 ✓

C. 201

D. 190

7. Which is greater: 156 or 165? (1 Mark)

A. 156

B. 165 ✓

C. They are equal

D. Cannot tell

8. What is the place value of 7 in the number 175? (1 Mark)

A. 7

B. 70 ✓

C. 700

D. 17

SECTION B — Short Answer Questions (2 Marks each)

1. Draw or describe how you would use tally marks to count 7 birds. (0 Marks)

► Make one small mark for each bird, so seven marks in a row (grouped as a group of 5 and 2 more) show 7 birds.

2. Why do we need a way to count and keep track of things, like the cowherds in the story? (0 Marks)

► Without counting, it is easy to lose track of how many things we have (like cows), so counting or making marks helps us know if any are missing.

3. Name two objects in your house shaped like a cuboid. (0 Marks)

► A book and a matchbox are both shaped like a cuboid.

4. What is the difference between a cube and a cuboid? (0 Marks)

► A cube has all six faces equal and square-shaped, while a cuboid has rectangular faces that are not all the same size.

5. Name one toy or object shaped like a cylinder. (0 Marks)

► A round pencil box or a battery is shaped like a cylinder.

6. Write the number 148 in words. (0 Marks)

► One hundred forty-eight.

7. Write the number "one hundred ninety" in figures. (0 Marks)

➤ 190

8. Arrange these numbers in increasing order: 120, 102, 112. (0 Marks)

➤ 102, 112, 120

9. What comes just before 200? (0 Marks)

➤ 199

10. Write any two numbers that come between 150 and 160. (0 Marks)

➤ 151 and 155 (or any two numbers between 150 and 160).

SECTION C — Short Answer Questions (Explain) (3 Marks each)

1. Explain why keeping track of numbers with marks or objects (like stones) can be useful, using an example from daily life. (0 Marks)

- If someone has many things to count, like sheep or coins, marking one line or keeping one stone for each item helps them know the total without forgetting.
- At the end, they simply count the marks or stones instead of remembering a big number in their head.
- This is how people counted before numbers were commonly used everywhere.

2. Look around your classroom and name three objects with three different 3D shapes. Describe one property of each. (0 Marks)

- A ball is a sphere - it can roll in any direction because it has no flat faces.
- A box is a cuboid - it has flat rectangular faces and can be stacked.
- A pipe is a cylinder - it has a curved surface and two flat circular ends.

3. Write any three 3-digit numbers between 100 and 200, then arrange them from smallest to largest. (0 Marks)

- Three example numbers: 134, 108, 176.
- Arranged from smallest to largest: 108, 134, 176.

4. Explain the difference between a flat (plane) surface and a curved surface, giving one example of each from shapes you have learnt. (0 Marks)

- A flat surface is straight and even, like the face of a cube or cuboid, which can rest evenly on a table.
- A curved surface bends smoothly with no straight edges, like the surface of a sphere or the side of a cylinder.

SECTION D — Long Answer Questions (5 Marks each)

1. Collect (in your mind or on paper) five household objects and sort them by shape - cube, cuboid, cylinder, cone, or sphere. Describe each object and its shape with reasons. (0 Marks)

- A dice is a cube because all its six faces are equal squares.
- A cereal box is a cuboid because it has rectangular faces of different sizes.
- A candle is a cylinder because it has a curved surface with two flat circular ends.
- A birthday cap is a cone because it has one flat circular base and comes to a point at the top.
- An orange is a sphere because it is round in every direction with no flat faces.

2. Explain in detail how you would count a large number of seeds (say around 150) accurately without losing track, and how this connects to what you learnt in "What's in a Name?" and "Double Century." (0 Marks)

- First, group the seeds into small piles of 10, since counting in groups is easier than counting one by one.
- Count how many piles of 10 there are, then count any leftover seeds separately.
- For example, 15 piles of 10 seeds plus 3 leftover seeds equals $150 + 3 = 153$ seeds.
- This is similar to how the cowherds in "What's in a Name?" needed a system to track amounts, and it uses place value ideas from "Double Century" to combine tens and ones into a 3-digit number.
