Class 4 Maths — CA-1 (Easy)

Class : 4

Subject : Maths (Math-Mela)

Max Marks : 70

Duration : 2 Hr 30 Min

Syllabus: Chapters 1–3 — Shapes Around Us, Hide and Seek, Pattern Around Us

General Instructions: All questions are compulsory. For Section A, write the correct option letter.

SECTION A — Multiple Choice Questions (1 Mark each)

- A shape with 3 sides and 3 angles is called a _____. (1 Mark)
A. Square
B. Triangle
C. Circle
D. Pentagon
- How many faces does a cuboid have? (1 Mark)
A. 4
B. 6
C. 8
D. 12
- A right angle measures exactly _____. (1 Mark)
A. 45 degrees
B. 90 degrees
C. 180 degrees
D. 360 degrees
- When you look at an object from directly above, which view are you seeing? (1 Mark)
A. Front view
B. Side view
C. Top view
D. Back view
- On a grid, if an object is in the top-left corner, where is it located? (1 Mark)
A. At the very bottom
B. In the first row, first column
C. In the last row, last column
D. In the middle
- Which of these numbers is an even number? (1 Mark)
A. 7
B. 15
C. 24
D. 31
- Which of these numbers is an odd number? (1 Mark)
A. 12
B. 18
C. 25
D. 40
- Even numbers always end in which digits? (1 Mark)
A. 1, 3, 5, 7, 9
B. 0, 2, 4, 6, 8
C. Only 0
D. Only 5
- In Indian currency, what symbol is used for rupees? (1 Mark)
A. \$
B. ₹
C. €
D. £

SECTION B — Short Answer Questions (2 Marks each)

- Name two 2D shapes and how many sides each has. (0 Marks)
- What is the difference between a face, an edge, and a corner of a 3D shape? (0 Marks)
- How many edges does a cube have? (0 Marks)
- If you are looking at a toy car from the side, which view are you seeing? (0 Marks)
- On a grid map, how would you describe the position of an object in the middle of the second row and second column? (0 Marks)
- Write any three even numbers between 10 and 20. (0 Marks)
- Write any three odd numbers between 20 and 30. (0 Marks)
- If you have 15 laddoos, can they be grouped into complete pairs? Why or why not? (0 Marks)
- If Ravi has a ₹100 note and a ₹20 note, how much money does he have in total? (0 Marks)

10. Name one 3D shape that has a curved surface and one that has only flat faces. (0 Marks)
11. How is a pyramid different from a prism in terms of its side faces? (0 Marks)
12. What is the relationship between the number of sides and the number of angles in a 2D shape? (0 Marks)
13. Why might a drone flying above a school be useful for understanding the "top view" of the school? (0 Marks)
14. How can we pay an amount of ₹35 using notes and coins? Give one way. (0 Marks)

SECTION C — Short Answer Questions (Explain) (3 Marks each)

1. Explain the difference between 2D and 3D shapes, giving one example of each. (0 Marks)
2. Describe how the top, front, and side views of a simple object like a box might look different from each other. (0 Marks)
3. Explain how grouping objects into pairs helps us understand even and odd numbers. (0 Marks)
4. A cuboid follows the rule Faces + Corners - Edges = 2. Verify this rule using a cuboid's properties (6 faces, 8 corners, 12 edges). (0 Marks)
5. Explain why understanding grid positions (like row and column) is a useful skill in everyday life, giving one real-life example. (0 Marks)
6. If a shopkeeper receives a ₹500 note for an item costing ₹135, explain how you would calculate the change to be returned. (0 Marks)

SECTION D — Long Answer Questions (5 Marks each)

1. Describe at least four different 2D and 3D shapes you can find in your classroom, explaining their properties (sides, angles, faces, edges, or corners as relevant). (0 Marks)
2. Imagine you are flying a drone above your school. Describe what you would see in the top view, and explain how this is different from what you would see standing at the school gate (front/side view). (0 Marks)
3. Explain, with examples, how even and odd numbers, along with basic understanding of money, are both examples of "patterns" that we use in daily life. (0 Marks)
