CA-1 — ANSWER KEY

Class : V

Max Marks : 30

Subject : Mathematics

Duration : 1 Hour

Syllabus: We the Travellers—I • Fractions • Angles as Turns

General Instructions: All questions are compulsory. For Section A, write the correct option letter.

Section A — MCQ, 1 Mark Each

1. Which number has the same nearest ten and nearest hundred?

- A) 7,126
- B) 7,835
- C) 6,999 ✓
- D) 7,030

2. If $\frac{1}{3} = \frac{2}{x}$, find the value of x.

- A) 3
- B) 4
- C) 5
- D) 6 ✓

3. Which fraction is the greatest: $\frac{5}{9}$, $\frac{5}{7}$, or $\frac{5}{12}$?

- A) $\frac{5}{9}$
- B) $\frac{5}{7}$ ✓
- C) $\frac{5}{12}$
- D) They are equal

4. Starting from South, you make a full turn clockwise. Which direction do you end up facing?

- A) North
- B) East
- C) South ✓
- D) West

5. 3 right angles equal how many quarter turns?

- A) 1
- B) 2
- C) 3 ✓
- D) 4

6. Find the value: $10,000 + 900 + 20 + 4$

- A) 10,924 ✓
- B) 19,024
- C) 10,942
- D) 1,924

7. True or False: An angle can be both acute and a full turn at the same time.

- A) True
- B) False ✓
- C) Sometimes
- D) Cannot say

Section B — 2 Marks Each

8. Choose the digits 1 and 9. Form two 2-digit numbers and find the result of the first subtraction only.

Ans: $91 - 19 = 72$

9. Explain in one line why the repeated-subtraction digit puzzle always ends at 9, no matter which two different digits are chosen.

Ans: Because the difference between any two-digit number and its digit-reversal is always a multiple of 9

10. For the digits 2 and 8, find (difference of digits) $\times 9$, and check it against $82 - 28$.

Ans: $(8-2) \times 9 = 54$; $82 - 28 = 54$, so they match

11. Compare $3/9$ and $4/8$ using two methods: (i) simplifying each fraction (ii) comparing with $1/2$.

Ans: $3/9 = 1/3 < 1/2$; $4/8 = 1/2$; so $4/8 > 3/9$ by both methods

12. Give one example of a number whose nearest hundred and nearest thousand are the same, and explain why this happens.

Ans: e.g. 7,030: nearest hundred = 7,000, nearest thousand = 7,000; this happens because the tens/ones part is small enough that both round down to the same value

13. If the minute hand turns $4/12$ of a full turn from 12, how many minutes does this represent, and what is $4/12$ in its simplest form?

Ans: $4/12 \times 60 = 20$ minutes; simplest form of $4/12$ is $1/3$

Section C — 3 Marks Each

14. A cyclist travels at 15 km/hr and a motorbike at 50 km/hr. In 3 hours, how much farther does the motorbike travel than the cyclist? Show your working.

Ans: Cyclist: $15 \times 3 = 45$ km; Motorbike: $50 \times 3 = 150$ km; Difference = $150 - 45 = 105$ km

15. Rearrange the digits of 48,247 (using all 5 digits) to form the smallest possible 5-digit number and the largest possible 5-digit number. State both.

Ans: Smallest = 24,478; Largest = 87,442

Section D — 5 Marks Each (Word / Application Problems)

16. Town populations: Town 1 = 65,232; Town 3 = 56,380; Town 5 = 45,858; Town 6 = 66,540. (a) Arrange in descending order. (b) Round each to the nearest thousand. (c) State which towns' populations round up and which round down, with reasons.

Ans: (a) $66,540 > 65,232 > 56,380 > 45,858$. (b) 67,000; 65,000; 56,000; 46,000. (c) Town 1 (65,232) rounds down since hundreds digit 2 < 5; Town 3 (56,380) rounds down since hundreds digit 3 < 5; Town 5 (45,858) rounds up since hundreds digit 8 $\geq$ 5; Town 6 (66,540) rounds up since hundreds digit 5 $\geq$ 5
