CA-1 (Chapters 1–3)

Class : V

Max Marks : 30

Subject : Mathematics

Duration : 1 Hour

Syllabus: We the Travellers–I • Fractions • Angles as Turns

General Instructions: All questions are compulsory. Read each question carefully before answering.

Section A — 1 Mark Each

1. Which number has the same nearest ten and nearest hundred? (a) 7,126 (b) 7,835 (c) 6,999 (d) 7,030
2. If $\frac{1}{3} = \frac{2}{x}$, find the value of x .
3. Which fraction is the greatest: $\frac{5}{9}$, $\frac{5}{7}$, or $\frac{5}{12}$?
4. Starting from South, you make a full turn clockwise. Which direction do you end up facing?

Section B — 2 Marks Each

5. Choose the digits 1 and 9. Form two 2-digit numbers and find the result of the first subtraction only.
6. Explain in one line why the repeated-subtraction digit puzzle always ends at 9, no matter which two different digits are chosen.
7. For the digits 2 and 8, find (difference of digits) $\times 9$, and check it against $82 - 28$.
8. Compare $\frac{3}{9}$ and $\frac{4}{8}$ using two methods: (i) simplifying each fraction (ii) comparing with $\frac{1}{2}$.
9. Give one example of a number whose nearest hundred and nearest thousand are the same, and explain why this happens.
10. If the minute hand turns $\frac{4}{12}$ of a full turn from 12, how many minutes does this represent, and what is $\frac{4}{12}$ in its simplest form?

Section C — 3 Marks Each

11. A cyclist travels at 15 km/hr and a motorbike at 50 km/hr. In 3 hours, how much farther does the motorbike travel than the cyclist? Show your working.
12. Rearrange the digits of 48,247 (using all 5 digits) to form the smallest possible 5-digit number and the largest possible 5-digit number. State both.

Section D — 4 Marks Each (Word / Application Problems)

13. Town populations: Town 1 = 65,232; Town 3 = 56,380; Town 5 = 45,858; Town 6 = 66,540. (a) Arrange in descending order. (b) Round each to the nearest thousand. (c) State which towns' populations round up and which round down, with reasons.

Section E — 2 Marks Each (From Your Textbook)

14. Take the digits 3 and 7. Form the two possible 2-digit numbers, subtract the smaller from the bigger, and repeat the process with the digits of each new result until you reach a 1-digit number. Show all your steps.

15. Rearrange the digits of 48,247 (using all 5 digits) to form the largest possible 5-digit number.
