CA-1 — ANSWER KEY

Class : V

Max Marks : 70

Subject : Mathematics

Duration : 2 Hr 30 Min

Syllabus: We the Travellers–I • Fractions • Angles as Turns

General Instructions: All questions are compulsory. Read each question carefully before answering.

Section A — 1 Mark Each

1. Write in figures: Twenty-three thousand two hundred thirty.

Ans: 23,230

2. Round off 73,005 to the nearest hundred.

Ans: 73,000

3. Continue the pattern: 10,794 → 10,796 → 10,798 → ____

Ans: 10,800

4. Which fraction is NOT equivalent to $\frac{2}{3}$? (a) $\frac{4}{6}$ (b) $\frac{6}{9}$ (c) $\frac{3}{5}$ (d) $\frac{8}{12}$

Ans: (c) $\frac{3}{5}$

5. Compare $\frac{7}{9}$ and $\frac{7}{11}$ using < or >.

Ans: $\frac{7}{9} > \frac{7}{11}$

6. Which is bigger: 9,990 or 49,014?

Ans: 49,014

7. One full turn equals how many quarter turns?

Ans: 4

8. Name the type of angle formed by a $\frac{3}{8}$ turn.

Ans: Acute angle

Section B — 2 Marks Each

9. Interchange two digits of 10,593 to make a number between 11,000 and 15,000.

Ans: Swap the digits 0 and 3: 13,590 (lies between 11,000 and 15,000)

10. Ravi's car has been driven 56,987 km and Sheetal's car 67,543 km. Whose car has been driven more, and by about how much (round the difference to the nearest thousand)?

Ans: Sheetal's car; difference = $67,543 - 56,987 = 10,556$, which rounds to 11,000

11. Arrange in ascending order: ■90,000 ■89,999 ■94,983 ■49,900

Ans: ■49,900 < ■89,999 < ■90,000 < ■94,983

12. Compare $\frac{11}{14}$ and $\frac{7}{20}$ using $\frac{1}{2}$ as a reference.

Ans: $11/14 > 1/2$ and $7/20 < 1/2$, so $11/14 > 7/20$

13. Find the fraction equivalent to $3/4$ with denominator 16, then compare it with $5/16$.

Ans: $3/4 = 12/16$; $12/16 > 5/16$

14. Reema takes 2 half turns in the same direction. What single turn is this equal to?

Ans: A full turn

15. Padma is facing East. If she takes a half turn clockwise, which direction does she face?

Ans: West

16. A giant wheel completes 2 quarter turns from its starting point. Name the angle formed.

Ans: Straight angle

17. Fill in the box: $4/7 = 8/\underline{\hspace{1cm}}$

Ans: 14

18. Write the number name of 39,593.

Ans: Thirty-nine thousand five hundred ninety-three

19. Find the nearest hundred and nearest thousand of 8,203. Are they equal?

Ans: Nearest hundred = 8,200; nearest thousand = 8,000; they are not equal

20. Compare $9/17$ and $3/15$ by simplifying $3/15$ first.

Ans: $3/15 = 1/5$; since $9/17$ is more than half and $1/5$ is less than half, $9/17 > 3/15$

21. Which of these fractions is greater than a whole (> 1): $7/9$, $3/9$, $12/8$, $7/11$?

Ans: $12/8$

22. Interchange two digits of 48,247 to make the number as small as possible using a single swap.

Ans: Swap 8 and 2: 42,847

Section C — 3 Marks Each

23. A school has 461 girls and 439 boys going on a trip. If autorickshaws carry 3 people each, how many autorickshaws are needed, and how many seats remain unused?

Ans: Total = 900; $900/3 = 300$ autorickshaws; 0 seats unused

24. Take the digits 2 and 9. Form two 2-digit numbers, subtract the smaller from the bigger, and repeat the process with the digits of the result until you reach a 1-digit number. Show all your steps.

Ans: $92-29=63$; $63-36=27$; $72-27=45$; $54-45=9$. Final digit = 9

25. Compare $6/7$ and $4/10$ using $1/2$ as a reference, explaining your reasoning.

Ans: $6/7 > 1/2$ and $4/10 < 1/2$, so $6/7 > 4/10$

26. Starting from West, take four right angles clockwise. What direction do you end up facing? Explain your reasoning.

Ans: 4 right angles = 1 full turn (360 degrees), so you end up facing West again

27. Find the fraction equivalent to $2/5$ with denominator 50, and with denominator 100.

Ans: $2/5 = 20/50 = 40/100$

28. A minute hand starts at 12 and turns by $7/12$ of a full turn. How many minutes have passed, and near which number will the minute hand point?

Ans: $7/12 \times 60 = 35$ minutes; the minute hand points near the 7

Section D — 4 Marks Each (Word / Application Problems)

29. A book has 200 pages, with about 50 words on each page. (a) Estimate the total number of words in the book. (b) A second edition adds 50 more pages of the same word density. What is the new total word count?

Ans: (a) $200 \times 50 = 10,000$ words. (b) $250 \times 50 = 12,500$ words

30. Raman ate 7 pieces of $1/4$ paratha, Radhika ate 6 pieces of $1/4$ paratha, and Maa ate 8 pieces of $1/4$ paratha. Find how many whole parathas each ate (as a mixed number), and the total parathas eaten by all three.

Ans: Raman = $7/4 = 1 \frac{3}{4}$; Radhika = $6/4 = 1 \frac{1}{2}$; Maa = $8/4 = 2$; Total = $21/4 = 5 \frac{1}{4}$ parathas

Section E — 2 Marks Each (From Your Textbook)

31. Rearrange the digits of 10,593 to form the smallest possible 5-digit number.

Ans: 10,359

32. How many notes of Rs 100 are there in Rs 65,342?

Ans: 653

33. Make a whole using 3 pieces of $1/12$, 1 piece of $1/4$, and 1 piece of $1/2$. Show that these add up to 1.

Ans: $3/12 + 3/12 + 6/12 = 12/12 = 1$ (since $1/4 = 3/12$ and $1/2 = 6/12$)

34. A boatman must cross a river with a lion, a sheep, and a bundle of grass, taking only one at a time. He cannot leave the sheep alone with the grass, or alone with the lion. Describe a safe order of trips to get all three across.

Ans: One valid solution: (1) Take the sheep across. (2) Return alone. (3) Take the lion across. (4) Bring the sheep back. (5) Take the grass across. (6) Return alone. (7) Take the sheep across again.
